

SE&T Colloquium Series-Fall 2012

Speaker	Dr. Jiro Naganuma Professor of Media and Information Systems Faculty of Management and Information Science Shikoku University, Japan
Title	<i>Most Advanced High Performance Chips Technology Trends</i>
Abstract	<p>Just Recently, iPhone5 was released with the new A6 chip. Its performance has doubled that of iPhone4S with the previous A5 chip about a year ago. What brings this kind of doubled performance improvement, and where will be directed in the future. Through surveying and considering this year's HotChips*, state-of-the-art high-performance processor technology trends from supercomputer to smartphone including mainframe, server, and desktop computer are introduced easy-to-understand for everyone.</p> <p>Note*: It is not painful potato chips. It is the world's most famous international high performance computer and chip symposium.</p>
Date	Tuesday, October 9
Time	4:10-5:00pm
Place	Pioneer 240
	Refreshments will be served at 4:00pm.
