

SE&T Colloquium Series-Winter 2014

Speaker	Dr. Stephen Taber Department of Biology
Title	<i>New insect species discovered in Michigan and elsewhere</i>
Abstract	Six new insect species from Michigan and Utah are discussed with photographs and descriptions of the animals and their habitats. Most are flies that are thought to breed in wetland fungi. One is a crane fly from high western desert.
Date	Tuesday, February 4
Time	4:10-5:00pm
Place	Pioneer 240
	Refreshments will be served at 4:00pm.
