

SE&T Colloquium Series-Fall 2014

Speaker	Dr. Stephen Taber Department of Biology
Title	<i>Five New Insect Species from the Northern and Southern U.S. and from Canada and a Key to all 6 Nearctic Species of a Genus</i>
Abstract	Five recently discovered insect species are presented. All five are flies. Three species were found in Michigan, one in Canada, and one in southern Appalachia. An illustrated key to all six Nearctic species of a genus is presented. The ongoing research program that led to these discoveries is discussed.
Date	Tuesday, October 7
Time	4:10-5:00pm
Place	Pioneer 242
	Refreshments will be served at 4:00pm.
