

Perinatal Substance Use Disorder Conference 2021 For Providers and Primary Care Teams

This project is supported by grant number 1H79SP082471-01 from the Substance Abuse and Mental Health Services Administration (SAMHSA) . Federal funds have provided \$1,500,000 or 67% of the total project cost, and non-governmental sources have provided \$739.440 or 33% of the total project cost.

MI Babies Project
CENTER FOR RURAL BEHAVIORAL
HEALTH & ADDICTION STUDIES

State of the Perinatal Substance Use Disorder Issue

MI Babies Project
CENTER FOR RURAL BEHAVIORAL
HEALTH & ADDICTION STUDIES

Objectives

Understand the prevalence of:

- perinatal substance use disorder,
- neonatal abstinence syndrome, and
- neonatal opioid withdrawal syndrome.

Addiction & Recovery

"Addiction is a <u>treatable</u>, <u>chronic medical disease</u> involving <u>complex interactions among brain circuits</u>, <u>genetics</u>, <u>the environment</u>, <u>and an individual's life experiences</u>. People with addiction use substances or engage in behaviors that become compulsive and often continue despite harmful consequences.

Prevention efforts and treatment approaches for addiction are generally as successful as those for other chronic diseases."

Adopted by the ASAM Board of Directors September 15, 2019

"A process of change through which individuals improve their health and wellness, live a self-directed life, and strive to reach their full potential."

Substance Abuse and Mental Health Services Administration (SAMHSA)

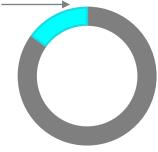

Women, Substance Use & Co-Occurring Disorders

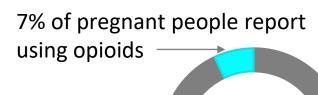

- 5.6% of women 18 and older have a substance use disorder
- Marijuana use increased from 13.4% (2018) to 14.8% (2019) among women 12 and older
- 3.3% of women have misused opioids
 - 98.8% misuse prescription pain relievers
 - 5.0% misused heroin
 - 3.8% misused both prescription drugs and heroin
- 8.4% of those ages 18-25 and 4.8% of those ages 26-49 have co-occurring mental health and substance use disorder
 - 74% received treatment for one of these conditions
 - Only 12.9% received co-occurring substance use disorder and mental health treatment

Substance-Exposure in Pregnancy

15% of pregnant people use nicotine

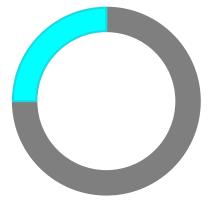

25% of pregnant people were prescribed an opioid during pregnancy

1 in 9 report alcohol use in past 30 days

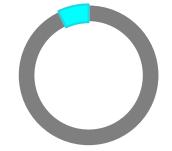

7% of pregnant people use marijuana during pregnancy

Of those, 1 in 5 report misusing opioids

Maternal opioid use has <u>quadrupled</u> since 2000

Substance Use & Pregnancy Considerations

- Unplanned pregnancy
- Sexually transmitted infections (STIs)
- Co-occurring psychiatric conditions
- Psycho-social challenges
- Stigma
- Potential punitive measures
- Post-partum depression and overdose death risk

Pregnancy and Substance Use Disorder

5% of all people who are pregnant have a substance use disorder

131% increase in opioid-related diagnoses (2010-2017)

Highest Opioid Overdose Death Risk 7-12 months after delivery 12.3 per 100,000

Fetal Alcohol Spectrum Disorders (FASD)

FASDs include several diagnoses related to exposure of the baby to alcohol during pregnancy. More specifically, fetal alcohol syndrome (FAS) is the most involved diagnosis, used when several physical and developmental abnormalities are present

- 0.2-1.5 to 1.5 infants with FAS for every 1,000 live births
- A recent study found 0.3 out of 1,000 children 7 to 9 years of age have FAS, while in-person assessments show higher rates of 6 to 9 out of 1,000 children
- Experts estimate the number of children with FASDs to be 1%-5% of the population As of 2002, the cost for one individual with FAS was estimated at \$2 million. It is estimated that United States care for persons with FAS alone is over \$4 billion annually

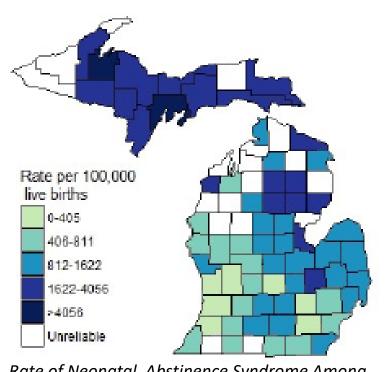

Neonatal Abstinence Syndrome (NAS) & Neonatal Opioid Withdrawal Syndrome (NOWS)

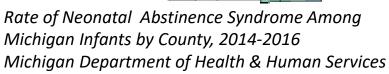

NAS occurs when a child born to a substance using mother develops a passive dependency to the substance, and expresses symptoms once the supply of the drug is cut off after birth (Finnegan, 2016)

- The rate of NAS among Michigan infants peaked at 846.2 per 100,000 live births in 2015, and decreased to 761.2 in 2016
- The highest county three-year (2014-2016)
 rates of NAS were in the northern portion of
 the Lower Peninsula and in the Upper
 Peninsula.
- Infants with NAS have longer hospital stays, with costs near \$1.5 billion nationally in 2012.

MI Dept of Health & Human Services: Natality, Pregnancy & Abortion Statistics. Accessed Feb 1, 2020 from https://www.michigan.gov/mdhhs/0,5885,7-339-73970 2944 4669 4681---,00.html

Rurality, SUD, NAS and NOWS

Nationally, over 21% of all infants born with NAS were born in rural communities.

MI Babies Project Overview

MI Babies Project
CENTER FOR RURAL BEHAVIORAL
HEALTH & ADDICTION STUDIES

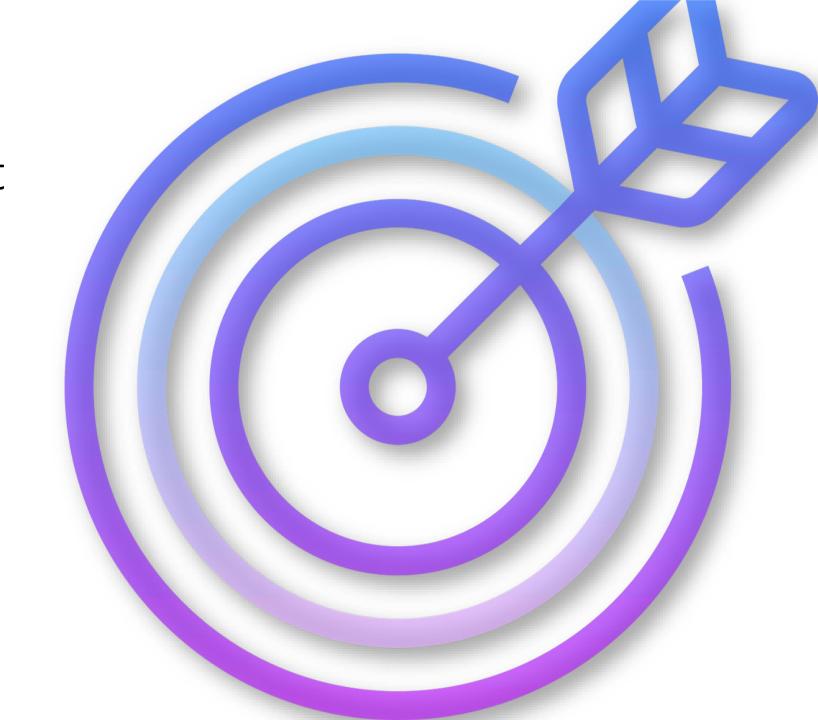

Counties Included in the Grant

- Arenac
- Bay
- Gladwin
- losco
- Ogemaw
- Oscoda

Goal of the Grant

Decrease number of babies born with Neonatal Abstinence Syndrome (NAS) and substance exposed pregnancies.

SBIRT

High Tech, High Touch (HT2)

- Can be used on any electronic device
- Screening for Depression, SUD, Tobacco use
- Provides a brief intervention (If necessary)
- Refers to services

Lesson 1

Lesson 4

Treatment Capacity

CBT4CBT

- Can be used on any electronic device
- 6 sessions 35-40 minutes each
- Self paced
- Has shown to work better for patients than traditional therapy
- Patient can begin whenever

Recognize The Triggers

Lesson 2

Deal With Craving

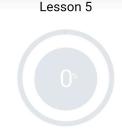

Stand Up For Yourself

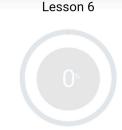

Plan Don't Panic

Stop And Think

Practice Evercise

Go Against The Flow

Practice Exercise

Stay Safe

Practice Exercise

ECHO

- Hub & Spoke Model
- Perinatal focus
- Didactic
- De-identified Case presentation

Resources

MI Babies Project
CENTER FOR RURAL BEHAVIORAL
HEALTH & ADDICTION STUDIES

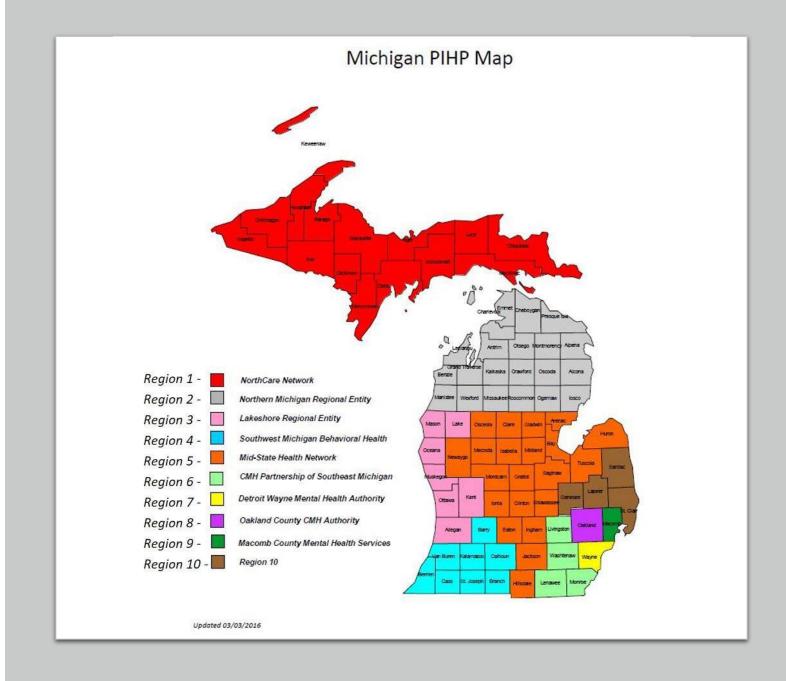

Objective

• Identify resources for people who are pregnant and living with a substance use disorder.

Prepaid Inpatient Health Plans (PIHPs)

- Manage Medicaid resources for behavioral health, developmental/intellectual disabilities and substance use disorder.
- Contract with Inpatient and Outpatient Substance Use Disorder service Providers.
- Contact your regions PIHP access line to access services for substance use disorders.

Copper Country Hiawatha Northpointe Northeast. Michigan Centra Wellness Networ Northern Lakes CMH1 Sable Valley West Michigan CMH for Central Sanilac Montcalm Gratiot Saginaw Lapeer Kent St. Clair Clinton-Eatdn& Oakland Allegan Barry Ingham Detroit/ Wayne Lenawee Monro

Community Mental Health Agencies

- Serve Children, Adolescents and Adults with mental health issues, developmental disabilities and substance use disorders.
- 24/7 free crisis line
- Infant Mental Health Services
 - ✓ Birth 5 years old
 - ✓ Individual & Family Therapy
 - √ Case Management
 - ✓ Education on Child Development
 - ✓ Parenting strategies
 - ✓ Psychiatry (as needed)

Maternal Infant Health Program (MIHP)

- Support pregnancy and infant health
- All pregnant and infant Medicaid patients eligible
- Home visits
- Referrals to Community Based Services
- Individualized plans created
 - ✓ Registered Nurse
 - ✓ Social Worker
 - ✓ Registered dietician
 - ✓ Lactation Consultant
 - ✓ Infant Mental Health Specialist

Early On

- Home visiting program
- Infants & Toddlers Birth to three
- Diagnosed Developmental delays or at risk for developmental delays
- Find social, health & educational services
- Support parents to help their children learn using daily activities
- Possible developmental delay if taking longer to develop:
 - ✓ Self help skills
 - ✓ Cognitive skills
 - ✓ Communication skills
 - ✓ Physical development
 - ✓ Social-emotional development
- Referrals can be made online, over the phone or via email

Great Start

Network public & private services & supports

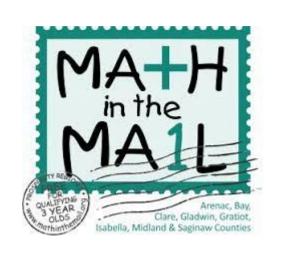

Great Start Collaboratives

- Parents & Community Leaders
- Planning, implementation & On-going improvement of great start system

Upper Peninsula Maternal Opioid Misuse Model (UP MOM)

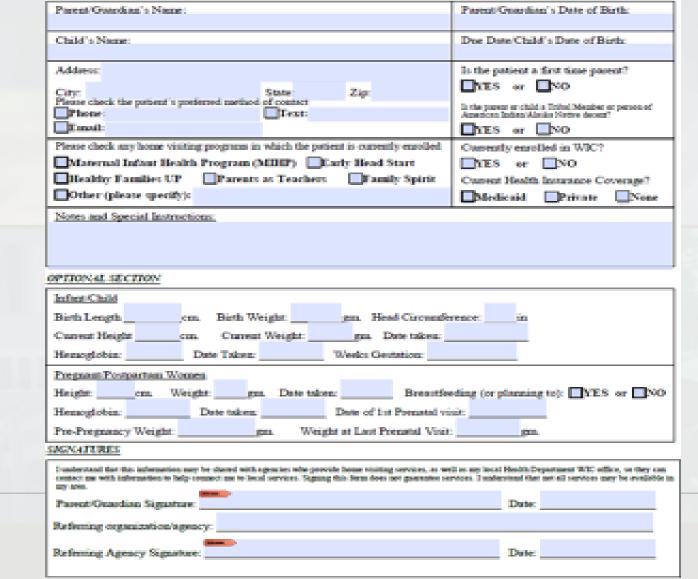

Katrina Keough, MPA, R.T.(R)
Project Director, UPHCS

kkeough@uphcs.org www.uphcs.org

Community Health Worker Model

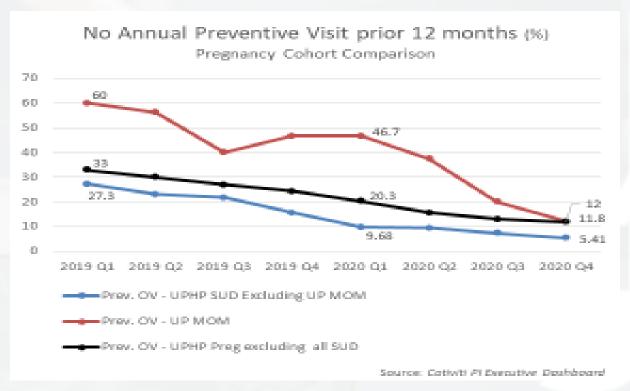

REQUIRED SECTION

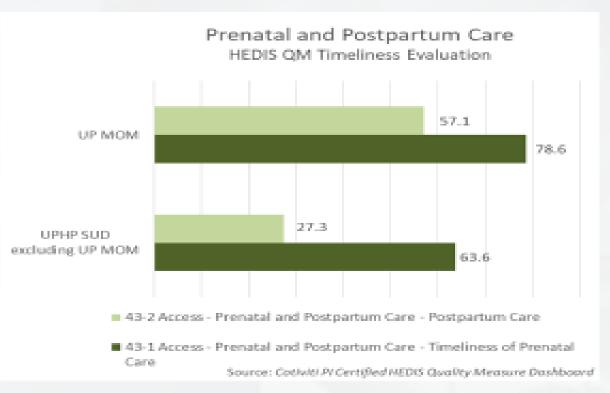

- Embedded in Maternal Infant Health Program (MIHP) -Marquette County Health Department
- Social Determinants of Health (SDoH)
 - Upon enrollment
 - · Weekly or biweekly
 - Address positive SDoH screens <24 hrs
- Coordination between enrollee and their providers and services.

Target Population and YTD Enrollment

Target Population

- Pregnant and <12mo. post partum from September 1, 2020
- Active or Hx of experiencing Opioid Use Disorder.
- Marquette County*
- Yr 1 Target 11 enrollees
- YTD enrollment 29
